... Start queueing render job with render engine: CompositionPlus and app path: C:\Users\aweine\Desktop\test.dwg The problem is that when it goes to do the first render, it crashes, it goes back to the main screen and crashes again, it goes back to the main screen and then the process stops. It never gets to the second render. Note that I'm running this in Windows 8 and 64-bit. Thanks in advance A: As far as I can tell, CompositionPlus is not available in 64 bit, so you should use Intergraph Composition Viewer. You can download and run it from here. It's free, but some features are still in beta. Q: Create Custom ListView in Android with multiple choice of View I want to create Custom list view which contains 3 choice of imageview each with a checkbox Should I use GridView or ListView? Since, you have provided no code, I can only guess that you are trying to add a checkbox in each row of your list. For that purpose, you could simply do the following: And then in the Java file, you could implement a custom BaseAdapter to show the checkbox and assign the data for that row: // SubClass of BaseAdapter public class MyAdapter extends BaseAdapter { // Array of data private ArrayList mData; // View reference for each row private View mView; // Our CheckBox that will be used for each row private CheckBox mCheckBox; public MyAdapter(Context context, ArrayList data) 82157476af
